INDEX TO SUBJECTS

Acetylcholine-induced current fluctuations in tissue-cultured muscle cells under voltage clamp 129
Adenine derivatives, hydrogen binding to tyrosine side chain 243
Anomalous diffraction and scattering from coated spheres 95
Apomyoglobin, nanosecond decay studies of fluorescence probe bound to 155
Area of erythrocytes entering micropipette 169
Asymmetric charge distributions in planar bilayers 103

Bacteriorhodopsin photocycle, quantum efficiency of 179, 185
Beneckea harveyi, calorimetric investigation of growth of 17
Bilayer membrane, dielectric constant of 111
— membrane, thin lipid, evidence that nystatin may not form channels in 269
— , planar, asymmetric charge distributions in 103
Biophysical science, changing nature of 203
Bonding, hydrogen, of adenine derivatives to tyrosine side chain 243

Calorimetric study of growth of luminescent bacteria 17
Capacitance, membrane, of cylindrical cell, and time-variant membrane resistance 145
^{13}C, relaxation times for [^{13}C]glycine in frog muscle 255
Cell, biological, coated sphere as a model of 95
— , cylindrical, with time-variant membrane resistance, passive parameters of 145
Channels in thin lipid membranes, not formed by nystatin 269
Charge distributions, asymmetric, in planar bilayers 103
Chloroplasts, exciton annihilation in photosystems of 1
Coated spheres as a model of cells 95
Conversion, photochemical, of purple membrane protein, quantum efficiency of 179, 185
Culture, tissue, and current fluctuations in voltage-clamped muscle cells 129
Cycloheximide, and inositol-less death and increased viscosity in yeast 205
Cylindrical cell with a time-variant membrane resistance, passive parameters of 145

Decay, nanosecond, studies of fluorescence probe bound to apomyoglobin 155
Deformability of erythrocytes entering micropipette 169
Dielectric constant of bilayer membrane 111
— properties of tissue, microwave, and rotational mobility of tissue water 193
Diffraction, anomalous, and scattering from coated spheres 95

Elasticity of resting frog skeletal muscle 213
Electrical properties of frog skeletal muscle fibers, and mesh model of tubular system 57
Electrodiffusion, and scaling, ions of one charge, and phase plane 27
Erythrocyte, area and volume of while entering a micropipette 169
Exciton annihilation in the two photosystems in chloroplasts at 100°K 1
Exclusion in hyaluronate gels 47

Fluctuations, current, in cultured muscle cells under voltage clamp 129
Fluorescence probe bound to apomyoglobin, nanosecond decay studies of 155

Gels, hyaluronate, exclusion in 47
Glycine, enriched with ^{13}C, spin-lattice relaxation times in frog muscle 255

Hemolytic method, permeability coefficients by 281
Hyaluronate gels, exclusion in 47
Hydrogen binding of adenine derivatives to tyrosine side chain 243

Inositol-less death in yeast and increase in viscosity 205
^{125}I-UdR-induced division delay 199
Ions of one charge, and electrodiffusion 27

Light, laser, velocity distributions of, in streaming *Nitella flexilis* protoplasm 229
— scattering, low-angle, from coated spheres 95

Lipid membranes, thin, nystatin may not form channels in 269
Luciferase, and growth of luminescent bacteria 17
Luminescent bacteria, calorimetric study of growth of 17

Mesh model, of tubular system, and electrical properties of muscle fibers 57
Membrane, bilayer, asymmetric charge distribution in 103
—, bilayer, dielectric constant of 111
—, erythrocyte, viscoelasticity of 169
— resistance, of cylindrical cell, and passive parameters 145
— thin lipid, evidence that nystatin may not form channels in 269
Micropipette, area and volume of erythrocytes entering 169
Microwave dielectric properties of tissue and rotational mobility of tissue water 193
Mitosis, ^{125}I-UdR-induced delay of 199
Mobility, rotational, of tissue water, and microwave dielectric properties of tissue 193
Muscle cells, tissue-cultured and voltage-clamped, acetylcholine-induced current fluctuations in 129
— frog, spin-lattice relaxation times for [^{13}C]glycine accumulations 255
—, skeletal, and mesh model of tubular system 57
—, skeletal, resting, viscous and elastic properties of 213

Nanosecond decay studies of a fluorescence probe bound to apomyoglobin 155
Nitella flexilis protoplasm, velocity distributions of light in 229
Nystatin does not form channels in thin lipid membranes 269

Osmotic pressure, and exclusion in hyaluronate gels 47

Permeability coefficients by hemolytic method 281
Phase plane, and electrodiffusion 27
Photobacterium leiognathi, calorimetric investigation of growth of 17
Photocycle, bacteriorhodopsin, quantum efficiency of 179, 185
Photosystems, exciton annihilation in chloroplasts 1
Probe, fluorescence, bound to apomyoglobin nanosecond decay studies of 155
Protoplasm, streaming, of *Nitella flexilis*, velocity distributions of light in 229
Purple membrane pigment photocycle, quantum efficiency of 179, 185

Quantum efficiency of the bacteriorhodopsin photocycle 179, 185

Refractive index, and dielectric constant of membrane bilayer 111
Relaxation times for ^{13}C in [^{13}C]glycine in frog muscle 255
Resistance, membrane, time-variant, and passive parameters of cylindrical cell 145
Rotational mobility of tissue water, and microwave dielectric properties of tissue 193

Scaling, and electrodiffusion 27
Skeletal muscle, and mesh model of tubular system 57
— muscle, resting, elastic and viscous properties of 213
Spheres, coated, as a model of cells 95
Spin-lattice relaxation times for ^{13}C in isotope-enriched glycine in frog muscle 255
Steady-state electrodiffusion and scaling, ions of one charge, and phase plane 27
Streaming, of *Nitella flexilis* protoplasm, velocity distributions of light 229

Tetrodotoxin, voltage-dependent action of 275
Tissue culture, and current fluctuations in voltage-clamped muscle cells 129
—, microwave dielectric properties of, and rotational mobility of tissue water 193
— water, rotational mobility of, and microwave dielectric properties of tissue 193
Tubular system, mesh model of, and skeletal muscle 57
Tyrosine side chain, hydrogen binding of adenine derivatives to 243

UdR, labeled with ^{125}I, induced division delay 199

Velocity distributions of streaming protoplasm in *Nitella flexilis* 229
Viscoelastic properties of the human erythrocyte membrane entering a micropipette 169
Viscosity, increased, and inositol-less death of yeast 205
Viscous properties of resting frog skeletal muscle 213
Voltage clamp, current fluctuations in muscle cells under 129
Voltage-dependent action of tetrodotoxin 275
Volume of erythrocytes entering micropipette 169

Water, tissue, rotational mobility of, and microwave dielectric properties of tissue 193
